

Abstract

A headlamp adjuster which includes a housing, an expandable member on the housing, and an adjuster member which is extendable and retractable relative to the housing. One end of the adjuster member is engageable with a reflector of a headlamp assembly, and the other end of the adjuster member is receivable in the expandable member. The expandable member is configured to expand to accommodate retraction of the adjuster member. The expandable member may be a bellows which is, for example, molded to the housing. The housing may be molded over the bellows, or vice versa. Alternatively, the bellows may be attached to the housing using, for example, a snap ring, adhesive or some other suitable means.
